The image shows a spacious, modern interior with a high ceiling and exposed wooden beams. In the foreground, there is a wooden dining table with four chairs. Behind it is a kitchen island with a wooden countertop and a sink. Large windows provide a view of a city skyline. A balcony with a glass railing is visible in the background. A text box is overlaid on the right side of the image.

WHO ARE WE?

Point in fact, we believe in a perfect smart home experience. Here at Smart Life Integration, we have been working with many of the top vendors in the smart home space to discover just that, a perfect smart home. By applying our combined experience of over 60 years in the technology space, we find ourselves in the perfect position to provide our customers with a beautiful home built on this technology to suit any lifestyle.

Privacy and security are at the very top of our belief for every customer and it is unwavering. We are excited to share with you our vision and introduce you to Smart Life Integration!

ELEGANCE MEETS TECHNOLOGY!

With your home being the place you spend a good portion of your time, enhancing your living spaces with convenience is something we strive for, all while maintaining that which makes your house a home.

Enjoy an efficient smart home without having your home look like a smart home. Seamless integration between devices and simple voice commands allows you to freely interact with your surroundings, enhancing your lifestyle for a natural experience that just feels right.

THE DIFFERENCE

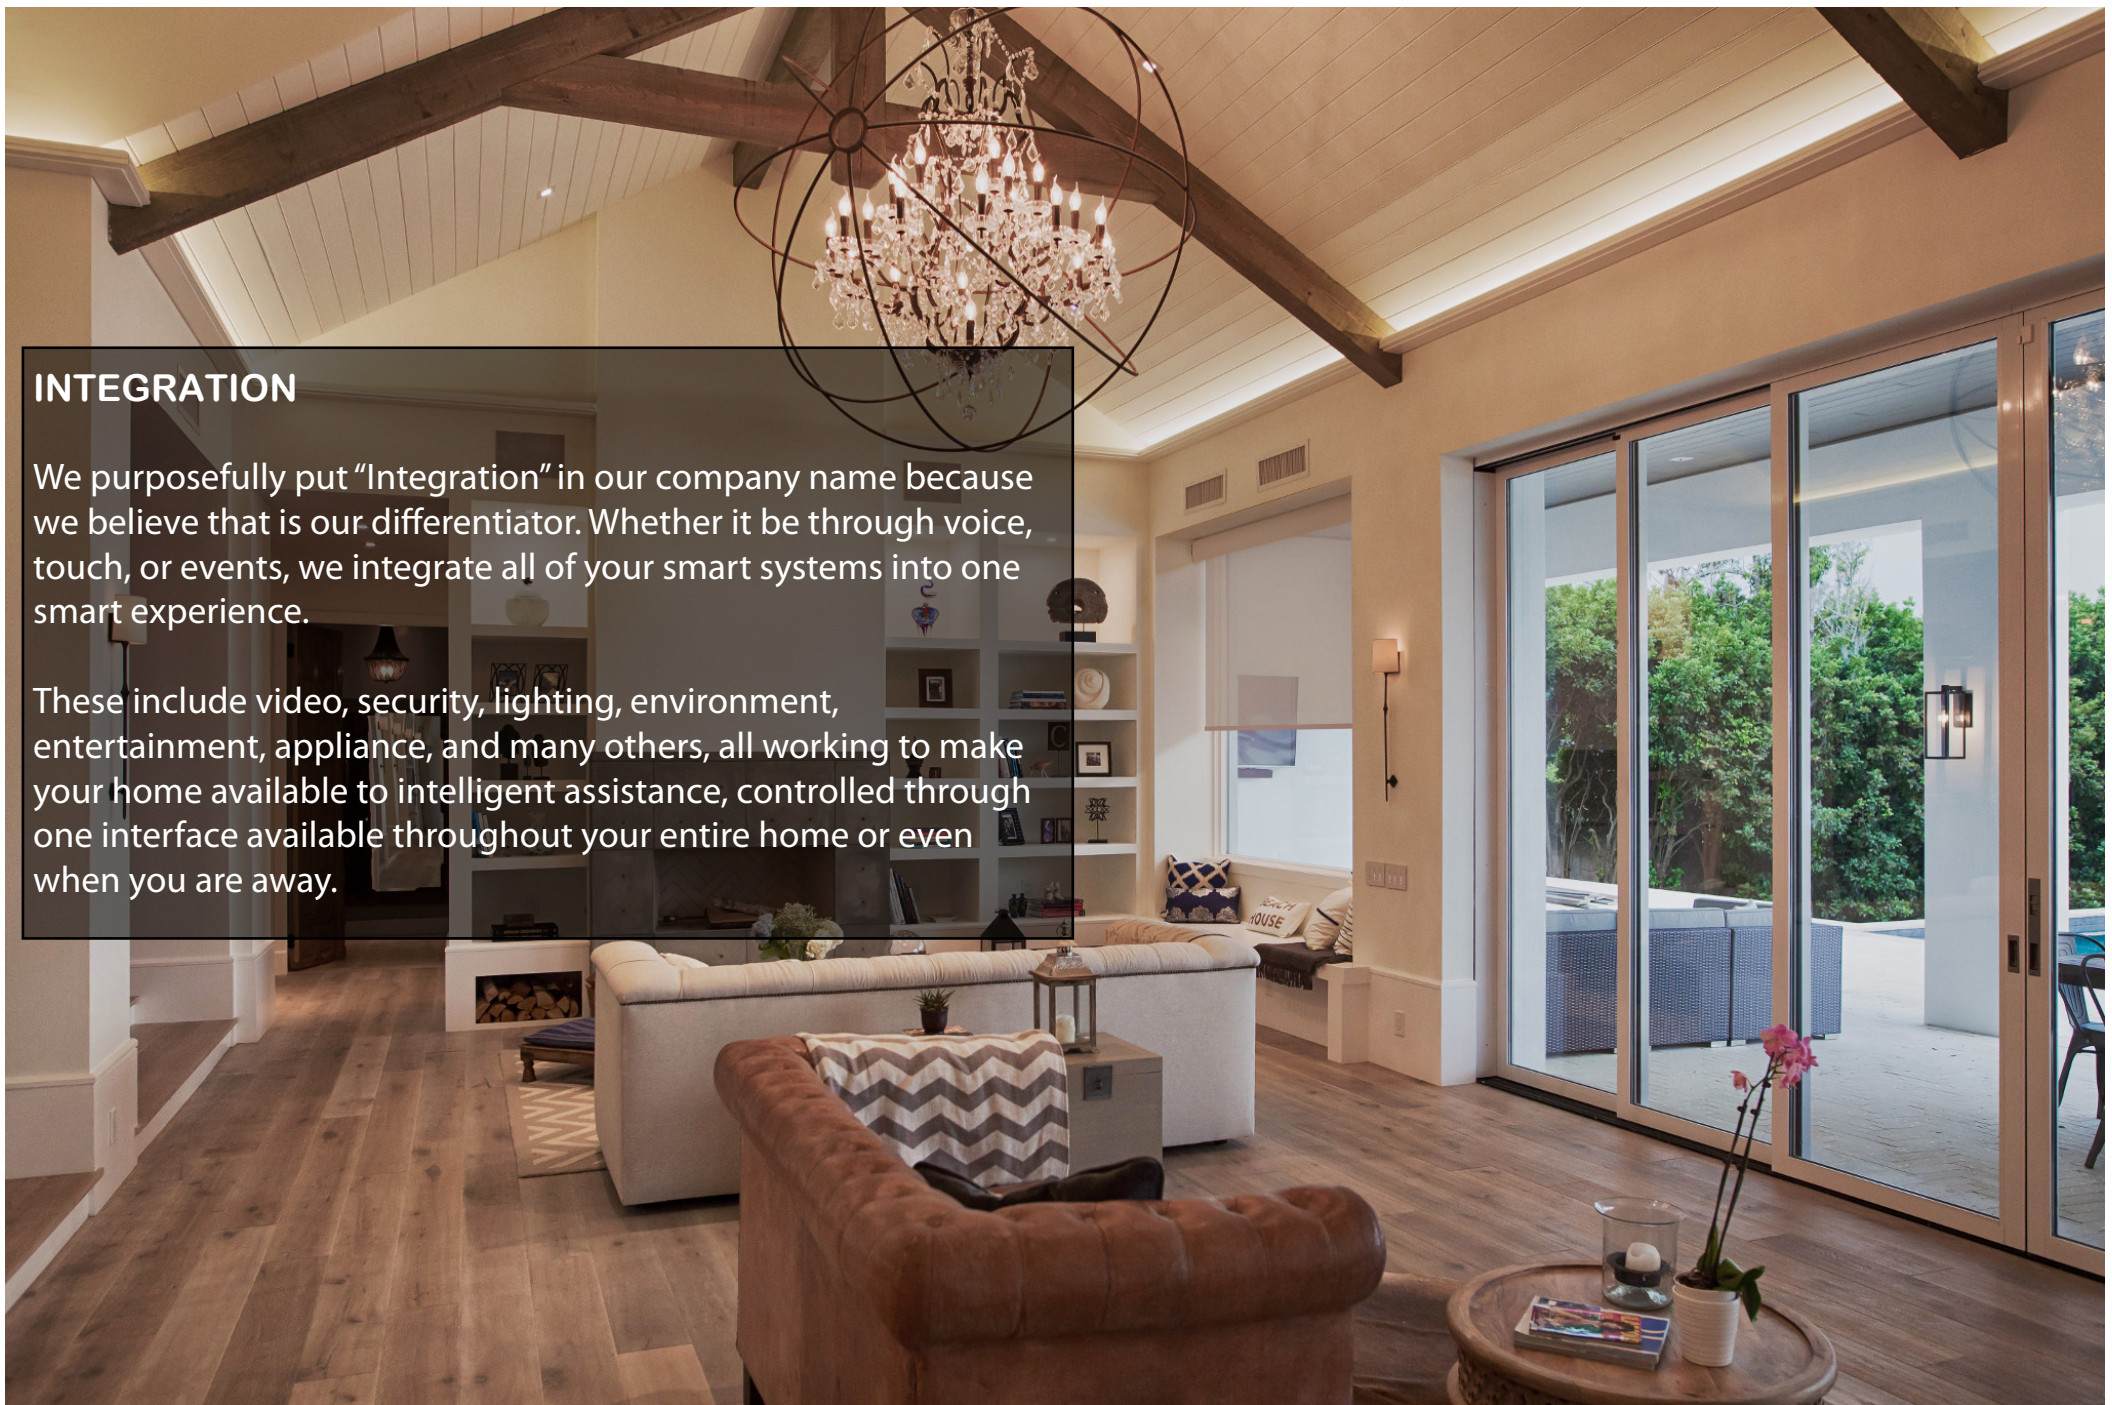

Your new smart home should fit your unique environment. Having a system that understands you, starts with an integration company that listens to you, and provides you with the best solutions on the market today.

At Smart Life Integration, we pride ourselves in doing just that. By truly understanding your lifestyle, we will provide you with a personalized system tailored to your needs.

INTEGRATION

We purposefully put “Integration” in our company name because we believe that is our differentiator. Whether it be through voice, touch, or events, we integrate all of your smart systems into one smart experience.

These include video, security, lighting, environment, entertainment, appliance, and many others, all working to make your home available to intelligent assistance, controlled through one interface available throughout your entire home or even when you are away.

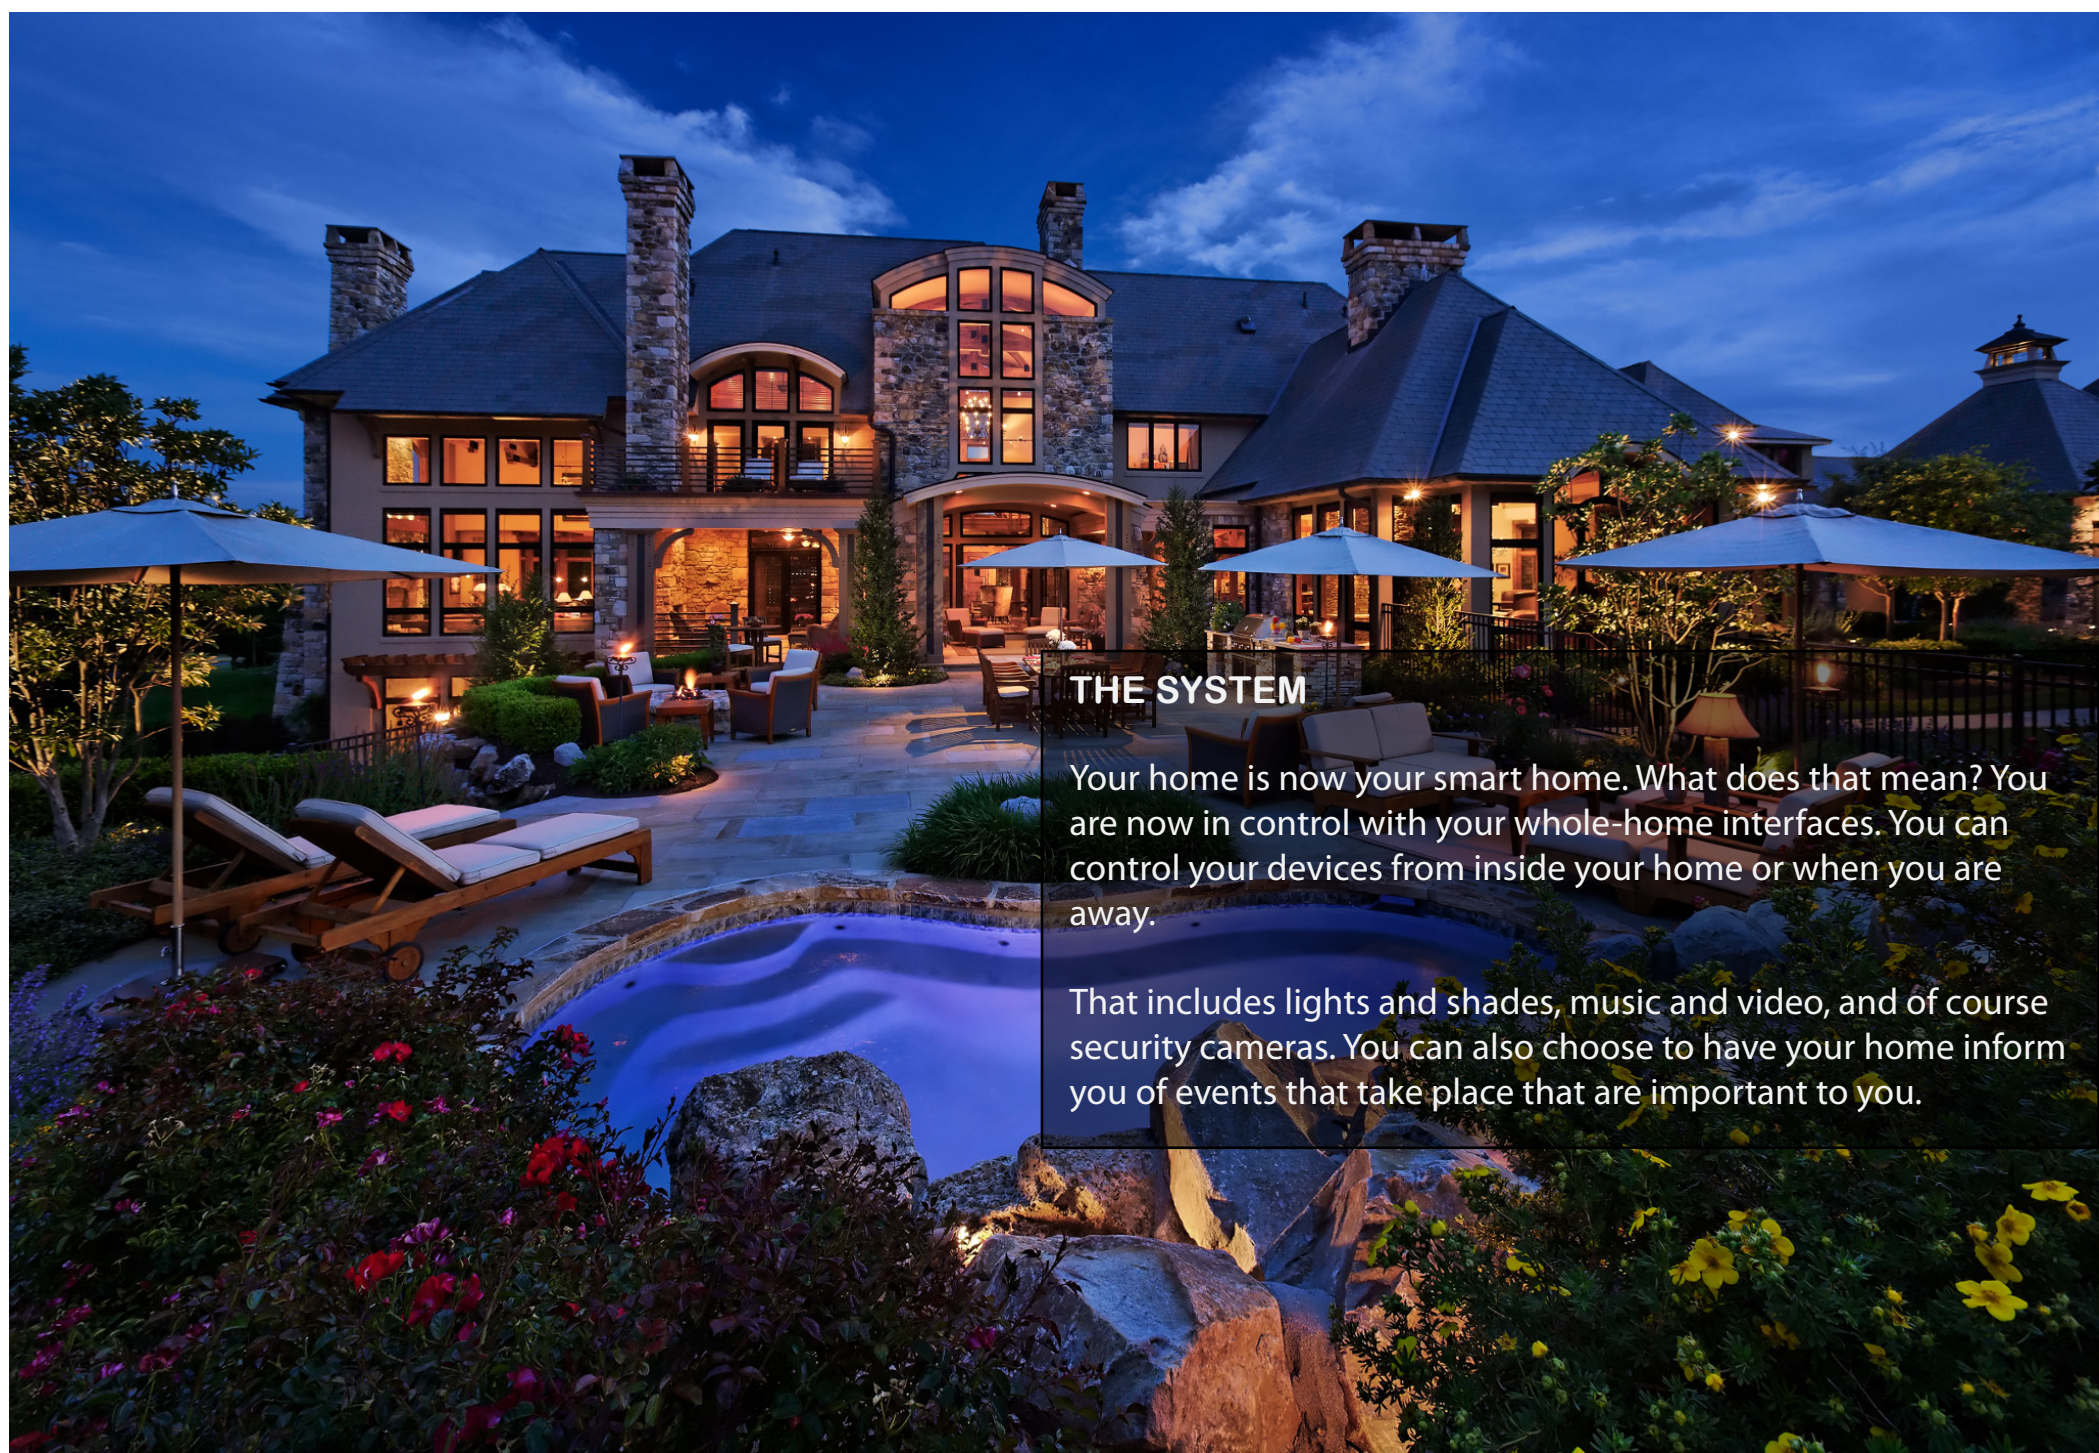

INTELLIGENCE

Things are about to get even better! With the continued growth of the Artificial Intelligence (AI) market contributions, our product offerings are only getting smarter.

Not only is this technology being integrated into the devices, it is also empowering you as the user to ask more detailed questions which result in generated tailored responses, all further enhancing your investment and quality of convenience. Instead of getting directions to a specific restaurant, you can ask for recommendations.

THE SYSTEM

Your home is now your smart home. What does that mean? You are now in control with your whole-home interfaces. You can control your devices from inside your home or when you are away.

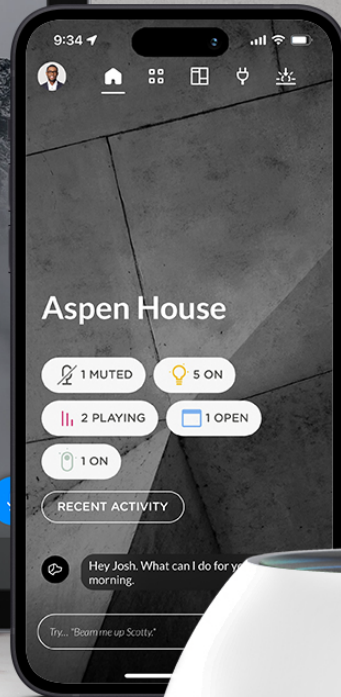

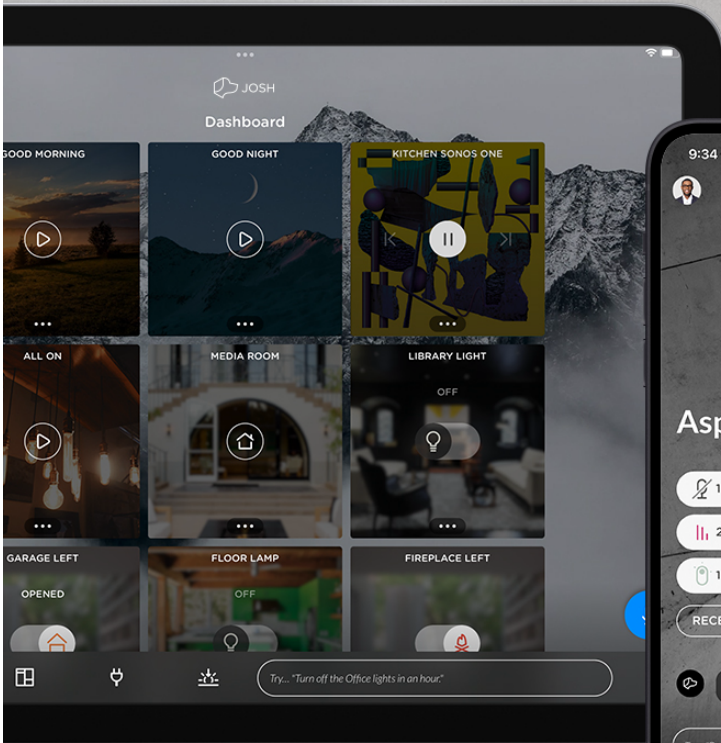

That includes lights and shades, music and video, and of course security cameras. You can also choose to have your home inform you of events that take place that are important to you.

WHAT ABOUT AUTOMATION?

Automation is one of the most powerful tools in our integration abilities. When we create your new smart home, adding several pre-programmed activities provides you with the ability to execute a group of activities called a **scene**.

For example, the Good Morning scene is activated, you can have the shades open, the lights in a room turn on, your favorite wake up music start, pretty much anything your home can do.

One Control, Many Devices

With your control center, interact with everything in your smart home. With one view, see the status of everything or tap to go to a specific room. Sensors in rooms will allow you to enter with lights on and when you leave, turn them off. If you want more light, ask for the shades to open.

No more fighting to see who will turn the lights off at bed time. Hands full, no problem. When the sun starts to set, adjust the lights automatically. That is the power of your smart home.
